PostalOne! Release 38.1.1.0.1 and Facility Access and Shipping Tracking (FAST) 28.1.0 deployed on September 10, 2014 to introduce software fixes to the system. Release 38.1.1.0.1 addresses MicroStrategy Reports. Release 28.1.0 included the items for FAST. The releases include corrections to issues previously identified from a previous release.

1.1. MicroStrategy Reports – Mail Owner Score Card

- Mailer Scorecard reports are updated to use eDoc piece counts in the denominator. (12371)

1.2. Facility Access and Shipping Tracking (FAST)

- The Add/Edit Content Information page is being updated so that Stand Alone Web Services created content can be associated with an appointment. Previously, an error displayed when mailers tried linking or associating Web Services created Parcel Select stand-alone content to an appointment. 331
- For on-line only, FAST users will be able to create or update Parcel Select Origin Entry (OE) one-time and recurring appointments when the selected Entry Type is 'ONDC' and the Presort Type is marked as 'Presort'. Previously, users saw a message that the Sort code is required. 332
- "Previously, when mailers externally created PRS, recurring appointments were correctly set to *Active* when first created, but then incorrectly set to *Pending Review* when they were updated. When mailers update external recurring Parcel Return Service (PRS) appointments, FAST will update the status to *Active* and not automatically change the status to *Pending Review* when the appointment is updated. 333
- The Address File copyright record now conforms to the file specifications and will operate as it had before there was a change in operating systems. The carriage return was removed and the correct padding was added. 337
